IT Services & Software Development ERP

Simple Module Summary for Client Meeting | Estimated Readiness: 85%

What the system does

The system helps a software company manage clients, projects, developers, finances, and support in one place.

Module	Simple purpose	Status
1. Dashboard	Shows project progress, pending tasks, deadlines, and team performance.	Existing / Enhancement
2. Client & Lead Management	Stores enquiries and helps the team follow up with potential clients.	Existing
3. Client & Account Management	Keeps client details, contracts, and project history together.	Existing / Enhancement
4. Project Management	Creates projects, defines requirements, budgets, milestones, and deadlines.	Existing / Enhancement
5. Task Management	Assigns work to developers and tracks task status and due dates.	Existing / Enhancement
6. Developer Reports	Records daily progress, completed work, pull requests, and blockers.	Existing / Enhancement
7. AI Project Reports	Summarizes project updates and helps identify delays or bottlenecks.	Existing / Enhancement
8. Accounts & Finance	Tracks project income, expenses, invoices, and client payments.	Existing / Enhancement
9. Agile Sprint Board	Adds Kanban boards, sprints, user stories, effort points, and sprint progress charts.	Customization
10. Git Integration	Connects GitHub, GitLab, or Bitbucket to automate task updates from code activity.	Customization
11. Bug Tracking & Support	Lets clients report issues and helps the team assign, prioritize, and resolve them.	Customization
12. SLA & Maintenance	Tracks support contracts, response times, and agreed service targets.	Customization

Suggested Implementation Plan

Phase 1 – Core System	Use the existing client, project, task, developer reporting, and AI reporting features.
Phase 2 – Development Workflow	Add Git integrations and Agile sprint/Kanban boards.
Phase 3 – Client Support	Add bug tickets, maintenance contracts, and SLA tracking.

Meeting summary: The system provides a foundation for managing the software delivery lifecycle—from finding clients and planning projects to assigning development work and supporting clients after delivery. The listed status should be confirmed against the current implementation.
